

## Concerning surface of Marmoroc

Marmoroc is a natural stone based on cement, natural crushed marble and pigment. The brushed surface varies depending on the grains of the natural marble which gives the façade a natural and lifeful outlook.

This phenomenon is purely aesthetic, because marmoroc is a natural stone made from natural raw materials and it has absolutely no consequences or influence on the technical performance of the system or stone and is not considered by Marmoroc AB., to be a defect.

Our production is under control from “*RISE, Research Institutes of Sweden*“ to make sure our quality is in accordance with our **European Type Approval ETA 16/0847** and fulfil all technical requirements.

Sincerely,

Mats Boman  
Marmoroc AB
